### **Infection, not to be taken lightly 感染，不能忽视**

An infection is the body's natural reaction to foreign substances or tissue damage (for instance trauma or muscle strain).

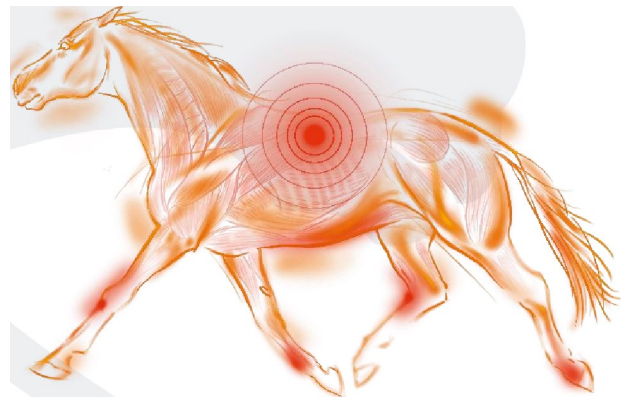

感染是身体对体外物质或者组织破坏的正常反应（比如创伤和肌肉拉伤）

The purpose of an infection is to repair damage to the body. The body dispatches white blood cells to the affected area to 'attack' any pathogens.

感染的目的是修复对身体的损伤。

体内将白血球发送至受影响区域以"攻击"任何病原体。

An infection can be identified because the skin over the affected area turns red and feels warm to the

touch. On top of that, infection is often accompanied by swelling and pain.

感染可以及时发现，因为受影响的区域的皮肤变红，并且触摸起来比较热。最重要的是，感染通常伴随着肿胀和疼痛。
